

Isaac Edwards

Software Engineer

+918 889 5552 946 E 61st APT 12H, Tulsa OK 74136 isaactheedwards@email.com
portfolio-website-flax.vercel.app

Versatile full-stack developer and data analyst with a proven ability to architect scalable software solutions and extract actionable insights from complex data. Skilled in integrating seamless front-end interfaces with robust, data-heavy backends. Adept at leveraging analytical rigor and statistical modeling to optimize performance and deliver highly efficient, user-centric applications.

SKILLS

TECHNICAL SKILLS

- **Programming & Frameworks:** Node.js, TypeScript, React, Next.js, Python, C, R, HTML, CSS, .NET, Express.js, Flask
- **Databases & Data:** SQL (PostgreSQL, MySQL, NeonDB), Redis (Caching), MongoDB, BigQuery, ETL/Data Transformation, Tableau, Power BI
- **DevOps & Tools:** Docker, Kubernetes, Vercel, GitHub Actions, GitLab CI, Bash, Figma, Google Suite
- **Practices & Methods:** TDD, Agile Development, CI/CD, Trunk-Based Development, Code Reviews, OAuth 2.0

EXPERIENCES

Back-End Engineer — Wurdo Capstone, Education (2025–Present)

- Engineered a low-latency ML communication layer using Redis hash/caching for storage, achieving a P90 latency reduction of 70% (from static PostgreSQL) and lookup times under 300 ms.
- Designed and deployed three Node/Express microservices, including a batched cache stash, which reduced server load and network bottlenecks by 90% and continuously updated the ML Word Model.
- Instituted CI/CD practices with a Trunk-Based Development model, scaling deployment frequency from weekly to 5-15 times per month while maintaining a change failure rate below 3%.

Front-End Developer — Cinema Guru, Education (2025–2025)

- Optimized database query performance in NeonDB through key search column indexing and pagination, resulting in an 80% improvement in API response times and a 45% reduction in server load via connection pooling.
- Developed a library of modular, type-safe components using TypeScript, leading to a 90%+ reduction in runtime errors compared to untyped prototypes and enabling reuse across multiple projects.
- Integrated OAuth 2.0 authentication (NextAuth) to streamline the login process, reducing friction by 60% and demonstrating a 98% success rate across three mobile operating systems during testing.

Front/Back-End Engineer — PortFolio (2023–Present)

- Developed and launched a full-stack personal development platform supporting over 100 concurrent monthly users, decreasing average page load time by 65% through code-splitting and lazy loading.
- Designed and implemented a responsive, user-centric interface that leveraged progressive enhancement and micro-interactions, evidenced by a 40% increase in average time-on-page during A/B testing.
- Engineered a high-performance blog platform with full CRUD capabilities and optimized server upload logic, allowing for successful processing of 10MB+ files in less than 1 second via chunked uploads.

EDUCATION

B.S Equivalent in Computer Science, Atlas School.
Google Data Analytics Certification
